The **Human Detector** module offers protection for one or two vehicles. The integrated acoustic alarm acts as a deterrent. Even the slightest contact is detected and is reported to the installed Centre, if necessary.

The **Human Detector** Alarm Centre can monitor up to 1,000 vehicles. Depending on the applied settings acoustic and/or optic alarms can be triggered. All alarm conditions are recorded and processed according to set guidelines.

In case an alarm is triggered on one of your vehicles, **Human Detector** directs a video camera to the location of the incident. You can send and record these images to your smart phone. Nothing gets lost and videos can be watched in real time or at a later point in time.

If your vehicle is stolen despite all the applied protective measures, it can be tracked worldwide with the help of **heddier GPS trackers**. The tracking devices are installed in hidden locations in the vehicle or are simply attached to it with the help of magnets.

Our protection systems offer comprehensive protection for your automotive treasures, irrespective if these are on display on your premises or off-site at an event.

heddier electronic has 30 years of experience in the application of sensors and video technology. Our technology protects automobiles in private and public collections worldwide.

Our 450m² large exhibition hall houses several collectors' vehicles and work of art. There we can demonstrate the effectiveness of our protection systems. Just the various vehicles dating from before the First World War are worth a visit for every automotive enthusiast.

We would be very happy to advise you and develop the optimum protection for your automobiles. This protection can of course also be extended to your works of art and other valuable exhibits.

Human Detector

... protects and monitors your automotive treasures

**Effective and comprehensive
protection for vehicles in
private collections and museums**

(C) 2017 heddier electronic

Human Detector protects your automobiles, two-wheelers, engineering objects of cultural heritage and works of art against vandalism, theft and damages. It was specifically designed for the protection of private collections and museums.

VERSATILE AND FLEXIBLE

Regardless if you wish to protect a compact car, an expensive and rare super car, a sedan or a vintage car with copper ornaments, the small **Human Detector** module is easy to connect to a conductive part of the vehicle. Another vehicle in the immediate proximity can also be connected and protected.

Once switched on, all metallic parts are protected. The slightest touch with a finger or a hand will immediately trigger an alarm. Non-metallic parts of the vehicle are protected with the help of integrated seismic sensors. Vibrations caused by actions such as the opening doors, positioning of tools or installation of wheels and tyres are detected and reported as an alarm.

Interiors of convertibles are monitored via radar detectors. The detectors can be installed out of view and detects anyone reaching into the monitored area. It is available as an accessory.

Door contacts, motion and glass breakage detectors are connected to an additional switching input. By doing so the surveillance is extended across the vehicles into the premises.

In case of an alarm a loud acoustic signal is sound and a message is wirelessly transmitted to a control centre, if desired.

EASY INSTALLATION

The installation of the **Human Detector** module on the vehicle is completed within minutes and can be achieved with hardly any specific skill. A distance of up to 300m in open space can be achieved thanks to modern wireless technology. Inexpensive batteries enable the operation over a period of 12 months. Battery voltage is constantly monitored to ensure the timely replacement of the batteries.

WORLDWIDE SURVEILLANCE

The **Human Detector** technology supports video and surveillance cameras. The resulting images can be saved. Recordings and real-time images can be viewed any time via the internet. All that is required is a PC and a smart phone.

Similar to receiving a text message your smart phone can trigger an acoustic alarm, if one of your vehicles is in danger. You can see real time footage and immediately take appropriate action.

CONSULTATION AS A SERVICE

Human Detector protects and monitors vehicles in private and public collections.

The effective protection of your property does not have to be expensive. We offer protection of your automotive treasures optimised for your needs.

We would be very happy to provide you with further no-obligation advice.
